How do large language models work?

Large language models are a type of machine learning based on neural networks. These models are systems that are trained on data. To create these models, millions of parameters are used in a neural network.

“You can know the name of a bird in all the languages of the world, but when you're finished, you'll know absolutely nothing about the bird... So let's look at the bird and see what it's doing—that's what counts.”
—Richard Feynman

RICHARD FEYNMAN

14

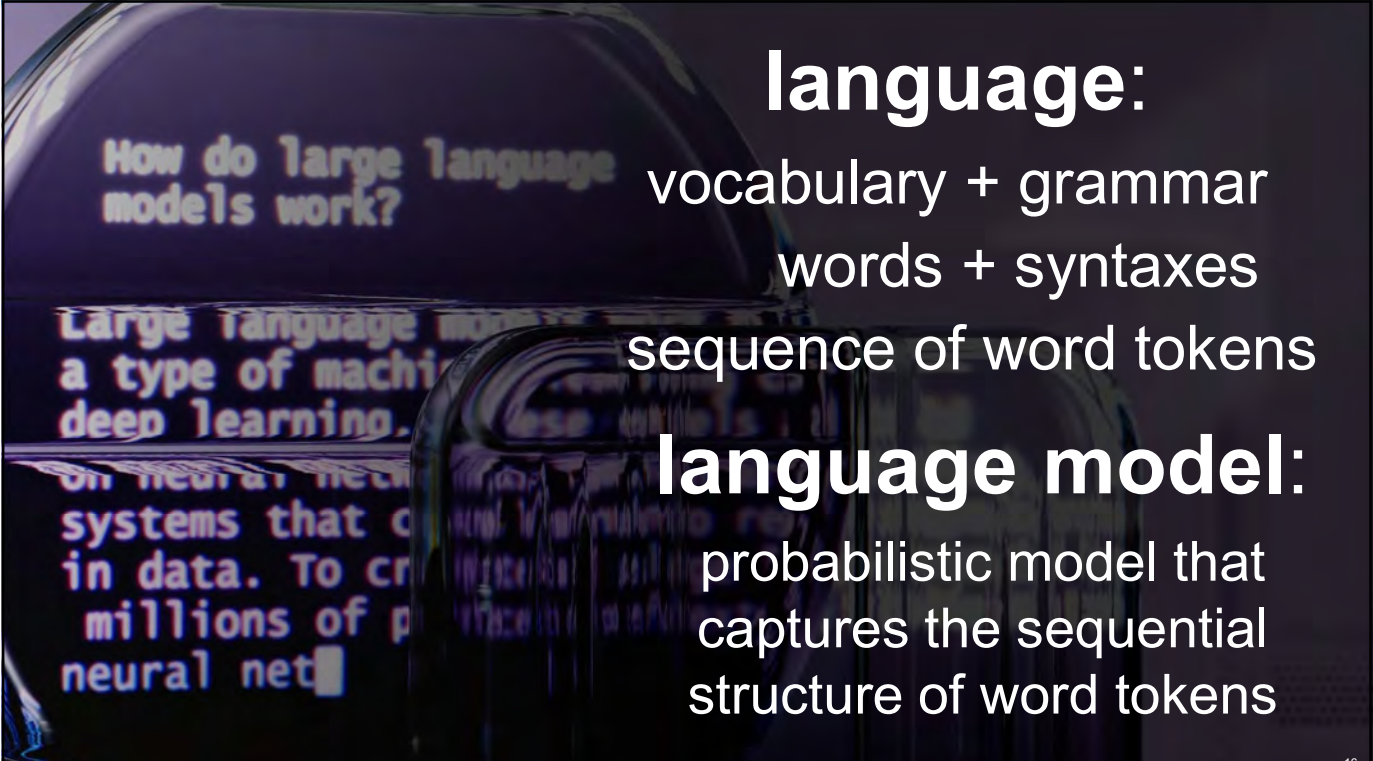

How do large language models work?

Large language models are a type of machine learning based on neural networks. These models are systems that are trained on data. To create these models, millions of parameters are used in a neural network.

what's a language?

15

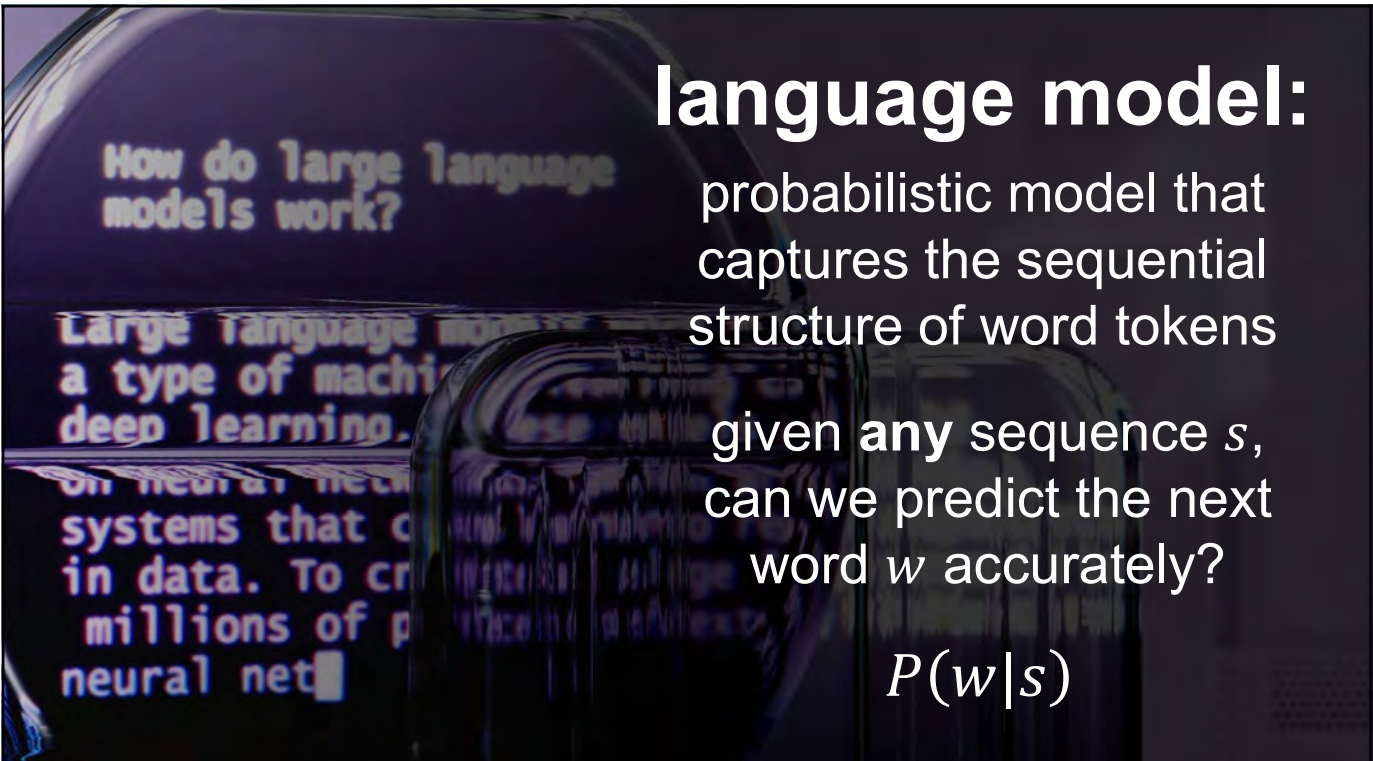

How do large language models work?

Large language models are a type of machine learning model based on neural networks. They are trained on massive amounts of data. To create these models, researchers use deep learning systems that process billions of words in data. To create a model, millions of parameters are adjusted in a neural network.

language:
 vocabulary + grammar
 words + syntaxes
 sequence of word tokens

language model:
 probabilistic model that captures the sequential structure of word tokens

16

How do large language models work?

Large language models are a type of machine learning model based on neural networks. They are trained on massive amounts of data. To create these models, researchers use deep learning systems that process billions of words in data. To create a model, millions of parameters are adjusted in a neural network.

language model:
 probabilistic model that captures the sequential structure of word tokens

given any sequence s ,
 can we predict the next word w accurately?

$$P(w|s)$$

17

language model:

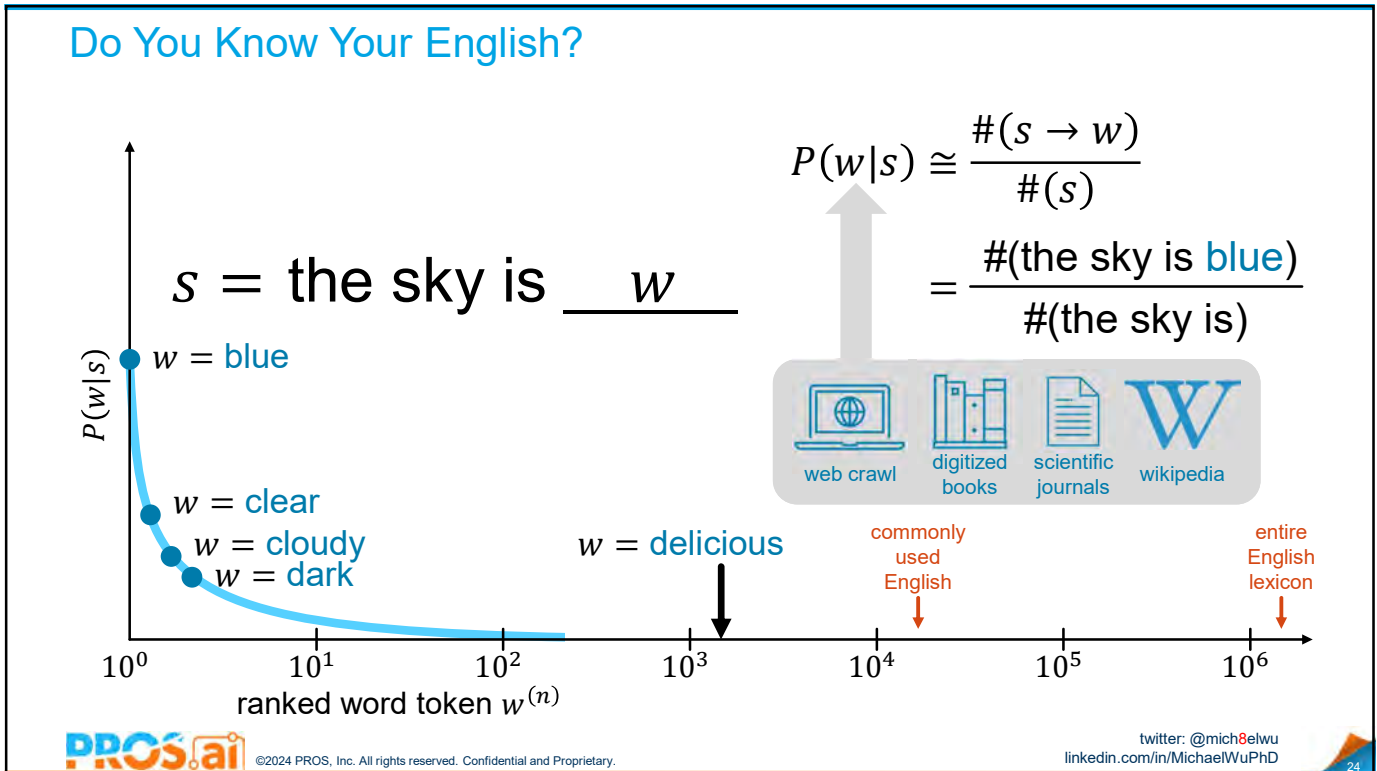

given *any* sequence s ,
can we predict the next
word w accurately?

$$P(w|s)$$

$s = \text{the water is filled with ribulose-bisphosphate-carboxylase-oxygenase, it's very } \underline{\hspace{2cm}}$

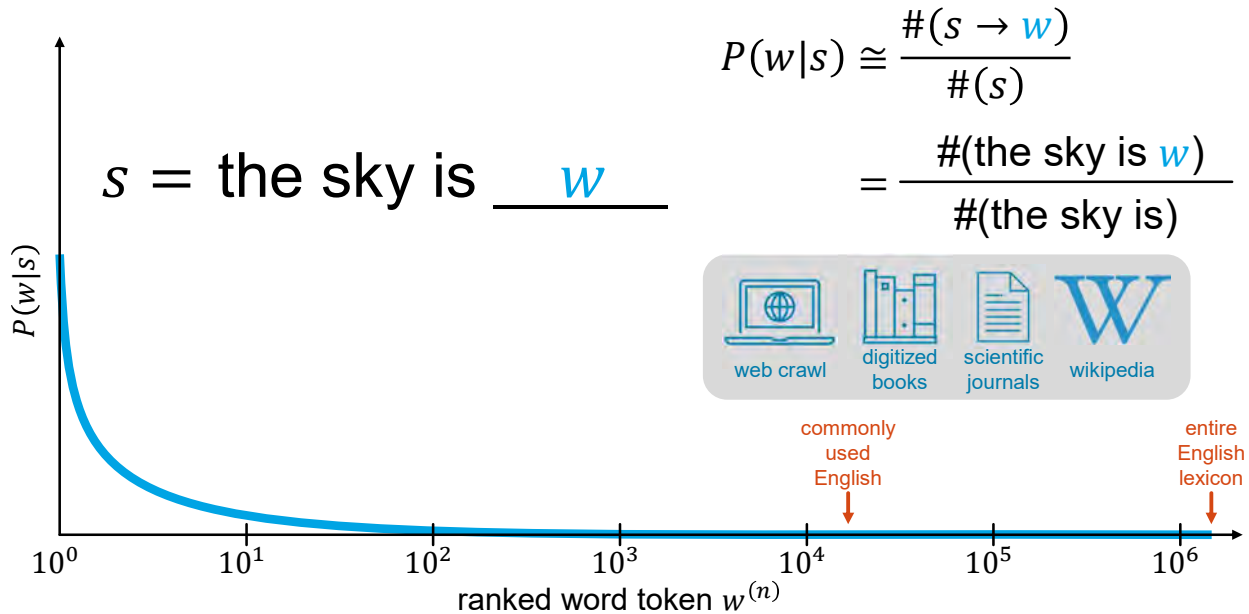

How do large language models work?
Large language models are a type of machine learning model based on neural networks that process data. To create these models, millions of parameters are trained on neural networks.

GPT: Generative Pre-trained Transformer is a large language model (LLM)

random number generator
from a distribution over *all* words
given *any* word sequence
trained with human written text
using transformer architecture

40

doesn't sound
very intelligent

41

ChatGPT has no knowledge of the real world

42

42

“*generative*” AI are, by definition and construction, *hallucinatory*

43

43

44

45

hallucination:
a feature
or a bug?

47

feature: for *design*
+ *creative*
use cases

48

49

fact-based applications require *grounding*

empirical Gaussian distribution

true Gaussian distribution

when there is no data empirically, don't make things up

conventional info. retrieval (e.g. search)

chatGPT to summarize search result

retrieval augmented generation

I don't know

51

A Language Guru with Broad General Knowledge

think of ChatGPT as a colleague

- reads lightning fast
- understands any language
- forgetful: small working memory (limited context length)
 - GPT3.5: ~4K tokens
 - GPT4: ~128K tokens
- has broad (non-specific) knowledge
- very imaginative, but overconfident

how could you leverage and work with someone with such skill?

ChatGPT and Beyond

50th b-day poem from ChatGPT

Happy birthday, Dr. Michael Wu
 Today we celebrate all that you do
 Your wisdom and insight we hold so dear
 Your guidance and leadership, always so clear

In the field of revenue management
 You are a true expert and phenomenon
 Your knowledge and skills have paved the way
 For success and growth, day by day

Your dedication and hard work
 Are an inspiration, no need to lurk
 Your passion for learning and innovation
 Have brought us all great motivation

So on this special day, we honor you
 For all that you have accomplished, it's true
 We wish you joy, happiness, and health
 May your dreams and goals be realized with wealth

Happy birthday, Dr. Michael Wu
 We are grateful for all that you do
 May your year ahead be filled with delight
 And your future be forever bright

89

A photograph of a business meeting. In the foreground, two people in dark suits are pointing at a large, glowing blue digital display that shows various data charts and graphs. In the background, another person in a light-colored shirt and tie is visible, looking towards the display. The scene is dimly lit, with the primary light source being the digital display itself, creating a professional and high-tech atmosphere.

there are not many mission-critical business applications based on GenAI

90

A photograph of a business meeting, identical to the one above. Two people in dark suits are pointing at a large, glowing blue digital display showing data charts and graphs. A third person in a light-colored shirt and tie is visible in the background, looking at the display. The lighting is focused on the digital screen, creating a professional and high-tech environment.

most mission-critical business decisions are made with the support of some sort of tabular data

91

Properties of Tabular Data

tabular data:
lower dimensionality
lack of internal correlation
